

ABSTRACT OF THE DISCLOSURE

A sheet feeding device is adapted to feed a recording medium including a first medium provided as a cut-sheet form and a second medium provided as a rolled-sheet form to a recording section at which a recording operation is performed with respect to the recording medium, by ejecting ink droplets thereto. A first sheet feeder is operable to feed the first medium stacked thereon to the recording section. A second sheet feeder is adapted to be detachably attached the first sheet feeder, and operable to feed the second medium to the recording section.
